# **Veteran Trees**

There is no single definition of a 'Veteran Tree'; it includes trees that fall into at least one of three general categories:

- trees of interest biologically, aesthetically or culturally, because of their age;
- trees in the ancient stage of their life, and
- trees that are old, relative to others of their species.

These trees can provide valuable habitat for a ENDEDBROKEN LIMIT range of other species, as well representing important gene pools for often declining species.

# **Identifying Veteran Trees**

#### **Characteristic Features**

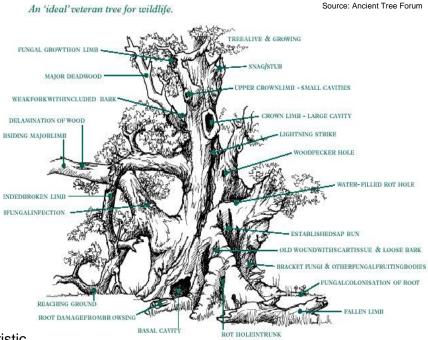

The diagram above shows some of the characteristic features of veteran trees; the more features present, the greater the value of the tree to the environment.

## **Protecting Veteran Trees**

#### **Sources of Funding**

Under Entry and Higher Level Stewardship, there are a number of options available to help protect veteran trees. These can contribute to points totals for ELS or £25 per tree for HLS.

### **Retaining Veteran Trees - Code of Conduct**

- Before starting any works on a veteran tree, check whether a tree has a Tree Protection Order or holds species protected by law (e.g. bats)
- Only consider felling to ground level as a last resort
  try other options such as reducing the canopy first
- Leave fallen branches and use them to protect trunks and roots from stock

#### **Protection from Grazing and Cultivation**

- Create a root protection zone around a tree 15x the width of its trunk – HLS assistance may be available
- Avoid applying fertilisers or pesticides near trunks or roots
- Fence off trees or provide physical barriers to prevent congregations of stock around veteran trees
- Provide alternative sources of shade and locate feeding / watering points away from veteran trees
